flexera™

Keep current with the latest version of every application in your portfolio

» AT A GLANCE

Make short work of handling security updates and the need to prepare new or updated applications for deployment. This ongoing work can often spike during a Windows 11 migration project or when adopting application virtualization. One solution like no other helps you meet the continuous need for new and updated software across the enterprise. Flexera AdminStudio is the market-leading choice for comprehensive application readiness. Not only does it facilitate every aspect of application readiness, but it also can take actions in bulk and automatically, thanks to new, built-in package automation capabilities. AdminStudio is also ready to help you take full advantage of the new MSIX packaging format and its many benefits.

More than just repackaging

AdminStudio is known for its ability to repackage legacy setups into desired formats and customize applications to meet your organization's needs. The need to repackage is less common these days, as vendor support for enterprise software deployment needs has evolved. AdminStudio has progressed, too.

It now provides unprecedented support for handling vendor setups to prepare applications for custom deployment faster without the need to repackage. AdminStudio will recommend silent command-line options and can even provide tested, validated command-line suggestions to save you time identifying and researching vendor setups. It can also convert the installers or wrap them in scripts for a customized deployment with the click of a button. When combined with robust testing and

» NOW YOU CAN

- Determine deployment options quickly and take advantage of vendor setup capabilities

- Automate end-to-end packaging processes in Intune and ConfigMgr from packaging to deployment

- Use a single, repeatable process to build, customize and test the delivery of applications

- Reduce operational risk caused by compatibility issues and application conflicts

- Wrap vendor setups with ease using PowerShell with integrated App Deploy Toolkit

- Utilize Package Feed Module containing 8,600+ downloads, silent installation details and detection methods

reporting to drastically reduce the risk of producing a bad package, AdminStudio becomes indispensable for your day-to-day application deployment needs.

Fast, consistent deployments

AdminStudio helps you keep up with application packaging and deployment needs like nothing else, giving you the ability to:

- Bulk process applications through an end-to-end process

- Schedule the handling of new packages automatically

- Utilize a robust set of PowerShell cmdlets

- Easily integrate into your existing package request flows with a documented REST API

Fix compatibility issues, and reliably convert to any format

AdminStudio automates the complex process of fixing compatibility issues, packaging and converting applications to the desired deployment format.
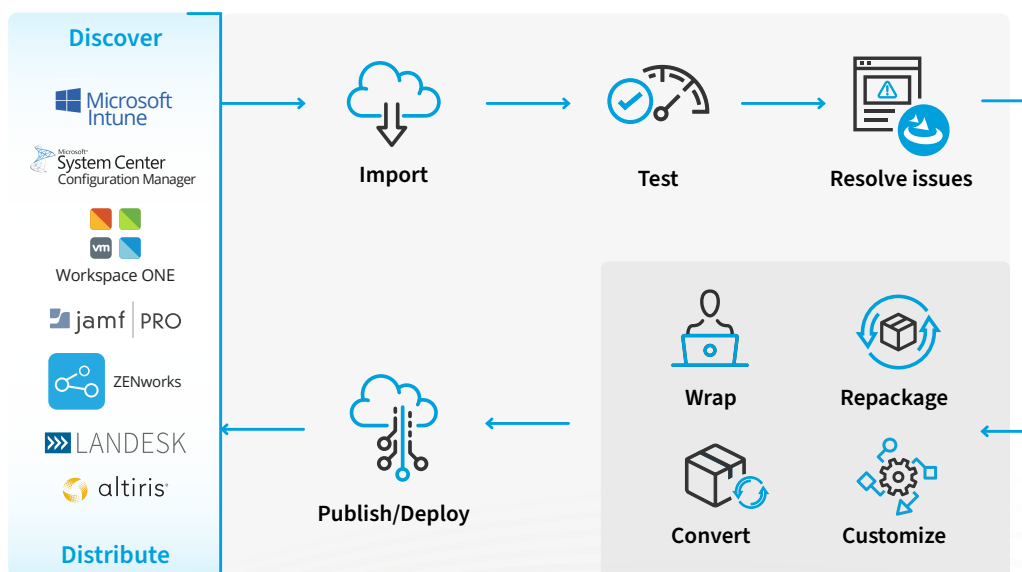

You can quickly prepare applications daily while continuing ongoing migrations and virtualization efforts. Standardizing your software packaging process with AdminStudio allows you to reliably package applications not just faster but with much higher quality. AdminStudio will empower your IT staff to maintain application readiness in an environment of rapid and constant change.

Take on the toughest application challenges

### Reliable application packaging and deployment

With AdminStudio, you can process applications in bulk, subscribe to packages for automated processing and script frequent tasks using the many provided PowerShell cmdlets. Execute advanced packaging, customization and authoring with the full power of InstallShield, the leading setup authoring tool. And save time by distributing applications directly to leading software deployment tools.

AdminStudio works with your existing endpoint management systems to quickly produce and distribute quality update packages

Automation, batch processing and manual processing

## Examples of the AdminStudio user interface

AdminStudio

Automate handling of new software updates

As new versions of applications are released, you can leverage the Package Feed Module to download, import, test, wrap or convert and publish new packages automatically. It can be time-consuming to identify the existence of updates to packages in your portfolio. But thanks to AdminStudio, the presence of a new version for thousands of third-party installers becomes an automated trigger for the full processing and publishing of a new package.

Windows 11 application compatibility

Maintain continuous application readiness even after your Windows migration is complete. AdminStudio produces valuable reports that show the status of operating system application compatibility test results.

Many identified issues can be remediated automatically. Reporting allows you to drill down and view a list of the packages by status. Compatibility testing and reporting are provided for all supported versions of Windows 11 as well as Windows 10 and Server.

AdminStudio provides reporting for all supported versions of Windows 11, 10 and Server

Ready and deploy your apps to ConfigMgr or Intune

Eliminate the friction of jumping around to multiple tools. AdminStudio helps assess compatibility and readiness to be deployed. In addition to publishing to ConfigMgr, Intune, and WorkspaceONE, you can also deploy directly to Intune, ConfigMgr endpoints using AdminStudio.

Accelerate application virtualization

Quickly identify which applications aren't candidates for virtualization, and get reports on fixes needed for conversion. Directly edit application virtualization packages and save time by automatically virtualizing applications in your format of choice.

Modernize your packages

With AdminStudio, you can modernize installers by leveraging the MSIX packaging format. Assess the suitability of applications, and then convert them individually or in bulk. Create modification packages, apply fix-ups and even publish your MSIX packages directly to popular endpoint management systems such as ConfigMgr and Intune. Benefit from advanced support for signing MSIX packages using HSM and EV via custom signing to enhance package security. Create App Attach image files for MSIX packages to simplify Windows Virtual Desktop management. AdminStudio helps you every step of the way on the journey toward leveraging the many benefits of MSIX.

Understand your application portfolio

AdminStudio can help you understand which applications are and aren't managed by comparing inventory reports against your package portfolio's contents. Get a handle on those applications not currently a part of your application catalog. Want to start managing any apps you identify? Look them up in the Package Feed Module by providing a setup file or by pulling packages directly from supported systems like Microsoft System Center Configuration Manager.

Simplify Mac application management

Bring Mac OS into the enterprise by standardizing compatibility, best practices and risk assessment. Deliver Mac applications to JAMF Pro and Workspace ONE.

About Flexera

Flexera helps organizations understand and maximize the value of their technology, saving billions of dollars in wasted spend. Powered by the Flexera Technology Intelligence Platform, our award-winning IT asset management, FinOps and SaaS management solutions provide comprehensive visibility and actionable insights on an organization's entire IT ecosystem. This intelligence enables IT, finance, procurement and cloud teams to address skyrocketing costs, optimize spend, mitigate risk and identify opportunities to create positive business outcomes.

More than 50,000 global organizations rely on Flexera and its Technopedia reference library, the largest repository of technology asset data. Learn more at **flexera.com**
